- ATMOSPHERIC SCIENCES, NASA LANGLEY  
RESEARCH CENTER, HAMPTON, VIRGINIA

# OUTLINE

- BRIEF DESCRIPTION ON CERES
- VALIDATION STUDIES CONDUCTED ON THE CERES SENSORS
- TROPICAL MEAN (TM) STUDY AND IT'S APPLICATIONS
- TM RESULTS FOR CERES INSTRUMENTS
- CONCLUSION

# CERES EXPERIMENT

- **MEASURE TOP OF THE ATMOSPHERE (TOA) AND SURFACE RADIATIVE FLUXES AS CONTINUATION OF THE EARTH RADIATION BUDGET (ERB) MEASUREMENTS**
- **PROVIDE CLOUD PROPERTY ESTIMATES CONSISTENT WITH RADIATIVE FLUXES FROM SURFACE TO TOA**
- **4 OPERATIONAL CERES INSTRUMENTS ON-ORBIT**
  - **FLIGHT MODELS 1&2(FM1 & FM2) - TERRA**
  - **FLIGHT MODELS 3&4(FM3 & FM4) - AQUA**

# CERES SENSOR CHARACTERISTICS

- **DETECTOR:**      **BLACKENED THERMISTOR BOLOMETER**
- **SAMPLE TIME:**      **10 MILLISECONDS**
- **SCAN PERIOD:**      **6.6 SECONDS**
- **FOV@NADIR:**      **(20) KM**

- | • | CHANNELS       | TOTAL        | SHORTWAVE    | WINDOW      |
|---|----------------|--------------|--------------|-------------|
| • | SPECTRAL RANGE | 0.3 - >100μm | 0.3 - 5.0 μm | 8.0 -12.0μm |

# **CALIBRATION & VALIDATION STUDIES**

- **ON-BOARD CALIBRATION UNITS**  
**INTERNAL CALIBRATION MODULE (ICM)**  
**MIRROR ATTENUATOR MOSAIC (MAM)**
- **VALIDATION STUDIES**  
**TROPICAL MEAN ANALYSIS**  
**THREE CHANNEL INTERCOMPARISON**  
**DIRECT COMPARISON OF SENSORS**

# TROPICAL MEAN (TM) STUDY

- **TM** IS THE AVERAGE OF NADIR RADIANCES OVER TROPICAL OCEAN UNDER ALL SKY CONDITIONS.
- INDIVIDUAL SAMPLES ARE IN LATITUDE REGION OF  $\pm 20^\circ$  FROM EQUATOR.
- THE AVERAGE DAILY **TM** RADIANCE SHOULD BE IN THE MEAN LATITUDE OF  $0.1 \pm 2^\circ$  AND LONGITUDE OF  $185 \pm 20^\circ$

# **TROPICAL MEAN (TM) STUDY**

- **CHOICE OF TROPICAL OCEAN MINIMIZES THE DIURNAL EFFECT IN THE DATA.**
- **THE DIURNAL EFFECT IN TM VALUE IS MODELLED AND CORRECTION IS APPLIED FOR ADJUSTING TM VALUE TO A COMMON TIME.**
- **NOON ORBIT IS TAKEN AS THE COMMON TIME FOR TM STUDY.**

# LONGWAVE (LW) TM VALUE

- LONGWAVE NIGHT-TIME **TM** IS VERY STABLE OVER TIME.
- 5-YEAR **TM** DATA FROM ERBS INSTRUMENT IS USED TO VALIDATE THE **TM** STATISTIC.
- DAYTIME LW **TM** VALUE WAS DERIVED BY TWO METHODS
  - TOTAL AND SHORTWAVE SENSORS
  - LONGWAVE (WINDOW) SENSOR

## Tropical Mean At Night (Total Sensor)

# TROPICAL MEAN (TM) DAY AVERAGES FROM CERES LONGWAVE SENSORS CERES Edition2 Data

# TM DAY-NIGHT DIFFERENCE (DN)

- DAY-NIGHT DIFFERENCE (DN) IS CALCULATED FROM BOTH LONGWAVE SENSORS.

## 1. TOTAL AND SHORTWAVE SENSOR

$$\text{DN}_{\text{TOT,SW}} = \text{TM}(\text{day, TOT-SW}) - \text{TM}(\text{night, TOT})$$

## 2. LONGWAVE/WINDOW SENSOR

$$\text{DN}_{\text{LW}} = \text{TM}(\text{day, LW}) - \text{TM}(\text{night, LW})$$

# TM DAY-NIGHT DIFFERENCE (DN)

- **DN FROM WINDOW SENSOR IS MORE RELIABLE SINCE IT IS INSENSITIVE TO CALIBRATION ERROR.**
- **AVERAGE DN VALUE FROM WINDOW SENSOR FOR ALL CERES INSTRUMENTS IS  $0.68 \pm 0.08 \text{ Wm}^{-2}\text{sr}^{-1}$ .**

# TM DAY-NIGHT DIFFERENCE (DN)

- **DN** FROM TOTAL-SHORTWAVE SENSORS IS SENSITIVE TO CALIBRATION DRIFTS IN EITHER OF THE SENSORS.
- **DN** FROM TOTAL-SHORTWAVE SENSORS IS MORE VARIABLE BETWEEN CERES INSTRUMENTS.
- AVERAGE VALUE FOR ALL CERES INSTRUMENTS IS  $0.27 \pm 0.3 \text{ Wm}^{-2}\text{sr}^{-1}$ .

## DAY NIGHT DIFFERENCE (DN) COMPARISON

# **DIFFERENCE IN TM DN VALUE**

- **DIFFERENCE BETWEEN THE TWO DN VALUES WILL TEST THE CONSISTENCY BETWEEN THE THREE SENSORS.**
- **TIME HISTORY OF THIS DIFFERENCE WILL SHOW ANY DRIFT THAT MAY OCCUR BETWEEN THE SENSORS.**

# TM VALUES: CERES FM2 INSTRUMENT

## Edition1 Data Product

## FM2 TROPICAL MEAN: EDITION-1 DAY-NIGHT DIFFERENCE

## DIFFERENCE IN DN VALUE FOR TERRA INSTRUMENTS

## DIFFERENCE IN DN VALUE FOR AQUA INSTRUMENTS

# DIFFERENCE IN TM DN VALUE

- THE DN DIFFERENCE RESULTS FOR ALL CERES INSTRUMENTS HAVE SHOWN A RISE WITH THE EDITION-1 DATA.
- THE SHORTWAVE PORTION OF THE TOTAL SENSOR IS CORRECTED TO ACCOUNT FOR THE DRIFT.

# CONCLUSION

- TROPICAL MEAN (**TM**) IS A POWERFUL TOOL FOR INTERCOMPARISON BETWEEN CERES SENSORS.
- THE AVERAGE NIGHT TIME **TM** FOR CERES INSTRUMENTS ON TERRA AND AQUA SPACECRAFT IS  $88.1 \pm 0.3 \text{ Wm}^{-2}\text{sr}^{-1}$ . CERES INSTRUMENTS ARE SHOWING A HIGHER **TM** VALUE THAN THE ERBS BASELINE VALUE OF  $87.13 \text{ Wm}^{-2}\text{sr}^{-1}$ .

# CONCLUSION

- **TM ANALYSIS ALONG WITH OTHER VALIDATION STUDIES HAVE INDICATED A RISE IN THE DAYTIME MEASUREMENT OF TOTAL SENSOR ON ALL CERES INSTRUMENTS. CORRECTIONS ARE DONE ON EDITION-2 DATA.**
- **EDITION1 VS. EDITION2 (EDITION3)**
